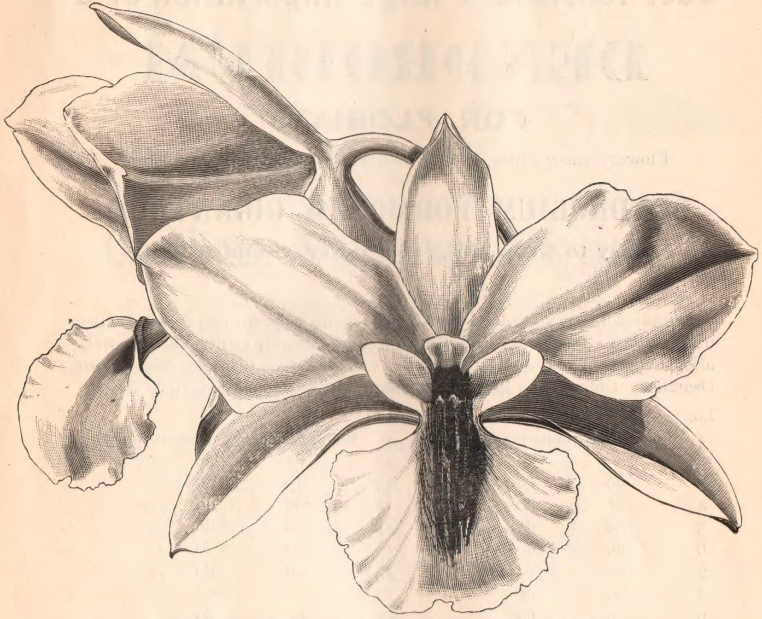
NOTICE.

THE popularity of these interesting and showy plants has increased considerably during the past year. The plants offered are in excellent condition and the imported plants have just arrived from the woods. With the spring and summer months before them, they will quickly establish and produce a grand display during the autumn and winter. Suspended from the roof of palm houses, they **will thrive** and bloom freely.

Gentlemen unable to attend the sale will have their bids most carefully executed, and plants can be packed to be forwarded to any distance.

Claims for deductions not allowed unless made immediately on receipt of goods.

TERMS CASH.



DENDROBIUM FORMOSUM GIGANTEUM.

CATALOGUE

Just received a large importation of a

DENDROBIUM

FOR FLORISTS

Flowers snow-white, 4 to 5 inches across, carried in clusters.

DENDROBIUM FORMOSUM GIGANTEUM.

Easy to Grow, Free to Flower, Useful to Cut.

Every florist should have a stock of this grand and most useful orchid. It is truly a florist's orchid, one of the best for cutting. Great clusters of snow-white blooms appear at the apex of the bulbs and are larger than any other known Dendrobe. Utilized with great effect both by the florist and decorator.

61 to 65 Eight smaller good imported plants

Oncidium Varicosum Rogersii.

A grand orchid for cutting, often producing upwards of 100 large, golden yellow flowers on a single spike during the autumn, presenting a magnificent effect, and of the greatest possible utility for cutting, and all florists' purposes. Blooming at a most valuable season.

The plants offered are of the most floriferous type.

The Richly Colored Burmese Type of

Dendrobium Wardianum Giganteum

Which is the Finest of all.

The plants here offered are in splendid order, and the present season is the best to purchase. Place them immediately in pans, baskets, or pots; they will commence to grow at once, and in the late autumn and at Christmas the pendulous bulbs will produce scores of blossoms on each, which measure individually 3 and 4 inches across. Sepals and petals wax-white, tipped with magenta. The large open lip has the same colors with an orange centre, blotched on each side with sanguineous crimson.

The brilliant colors are most effective, and the plants can be used for all kinds of decoration.

Lælia Purpurata.

Aptly termed the King of Lælias.

A superb exhibition plant, easily grown, and most satisfactory for cutting purposes. The very large blossoms appear 4 and 5 together on a stem during spring, white and light rose, with a rich crimson maroon lip (often almost black) and a golden yellow throat.

171 to 175 Two fine plants

LÆLIA PURPURATA.

Haemanthus Katherinae.

Among the most beautiful in the whole genus. The flowers as in H. Kalbreyeri and H. multiflorus are borne in dense globular umbels, but in Hæmanthus Katherinæ the floral segments are very much broader than in the other species

mentioned, and of a most beautiful apricot-scarlet, a distinct pleasing shade. The culture is most simple, and the species is one of the most effective decorative plants possible to obtain.

Lot
176 to 180 Four good bulbs

Dendrobium Secundum?

Extra strong imported plants, of what is probably this very distinct and highly attractive species. Flowers of a bright rose-magenta, softened with white, carried on stout spikes produced at right angles, on the upper apices of the stems.

Lot
181 to 185 Selected imported plant

CATTLEYA LABIATA.

Cattleya Labiata.

The Florists' Cattleya. The Finest for Cutting.

The true old autumn flowering Cattleya. It is the easiest Cattleya to grow. One of the finest for cutting. Five and six large blossoms are borne on a spike, long lasting and very useful.

Dendrobium Phalaenopsis.

The same deep richly-colored type, originally discovered by Fitzgerald, and which yielded D. P. album and D. Statterianum. An extremely beautiful, very useful and free-flowering species; the flower spikes are from 10 to 15 inches high, and bear from 15 to 20 brilliant blossoms, each from 2 to 3 inches across, with usually sepals and petals of a warm magenta-purple, the lip deep rosy purple veined with maroon-crimson. To the florist hardly any flower can be more useful, their rich colors and lasting properties adapting them admirably for bouquets and all kinds of decoration, particularly buttonholes.

D. Phalænopsis is now seldom imported, and the plants offered are particu-

larly promising in appearance. Such forms as D. Sumneri, and perhaps D. Loftii, etc., are probably among them.

WATSONIA ARDERNEI.

Well-ripened bulbs in splendid order. Owing to the late Transvaal war and the scarcity of this splendid Watsonia, we have had great difficulty in securing only a few of this remarkable bulb. This magnificent white-flowered Gladiolus-like plant is the finest of all white Watsonias.

For the cool greenhouse, conservatory, for the warm south border in the open air, for wreaths, bouquets, and for all floral decorations, it is unrivaled and unapproachable. Very floriferous; of easy culture.

This Cape bulbous plant has flowers of the purest white on tall, erect, many-branched panicles, producing a succession of flowers from the base to the summit.

LAELIA PRAESTANS.

One of the most beautiful of dwarf-growing Lælias; its blossoms are large, round and of fine magenta. Most useful for buttonholes. Requires very little space, and gives an abundance of flower.

Lot

593 to 600 Four well-established plants, several growths

Laelia Pineli Pumila Dayana

Among the plants offered will be found great variation; an easy-growing Lælia, free to bloom; grows freely suspended from the roof.

Lot

601 to 605 Four fine plants

Laelia Cinnabarina.

Beautiful orange-scarlet flowers are produced on long, erect spikes. Many distinct and showy hybrids have been obtained by utilizing this Lælia as a parent.

Lot

606 to 610 Four strong plants

Cypripedium Callosum.

A fine variety for cutting, produces in winter long stems, carrying bold blossoms, white, purple and green. Very free flowering; very easy growing.

Lot

611 to 613 Four well-established plants

ONCIDIUM CONCOLOR.

Golden yellow blossoms are produced in great clusters from this very desirable Oncidium. Requires very little room, and is most attractive when in flower.

Lot

614 to 616 Four established plants in pans

Cypripedium Charlesworthi.

There are many distinct varieties among the plants offered. Very free flowering. Its blossoms appear during the winter, and the broad flat dorsal sepal, with its various shades of rose and the pure white staminode, with a strong stem, makes it useful for cut-flower work.

Lot

617 to 620 Four established plants, several growths

LAELIA HARPOPHYLLA.

Flowers bright orange scarlet, showy and well adapted for cutting.

Lot

621 to 623 Three fine established plants

CATTLEYA TRIANÆ.

ANOTHER PROPERTY.

Cattleya Trianae.

Fine established plants of this popular and useful Cattleya.

Cattleya Mendelii.

Lot
634 to 637 Two well-established plants

Cattleya Intermedia.

Strong plant; established plants of this easy-growing and free-flowering species.

Lot
638 to 642 Two very good plants

Cattleya Harrisonae.

Lot
643 to 647 Two strong plants

Cattleya Superba.

A scarce Cattleya from the Rio Negro. One of the most beautiful and very showy.

Lot
648 to 650 Two very good plants

Laelio Cattleya Burberyana.

A very chaste and beautiful hybrid.

Lot
651 Extra strong plant

Sobralia Veitchii—Rare

Lot
652 Strong plant, several growths

Cypripedium Villosum.

A splendid lot of fine established plants. This Cypripedium, one of the finest for cutting, produces its large shining flowers during the winter months, lasting long in perfection.

Lot
653 to 660 Two well-grown plants in 6-inch pots, many growths

Lot
661 to 665 Four established plants
